50-Day Wedding Lean Plan

Male · 27 years · 85 kg · 5′10″ · 1 year of gym training · office job
Machine gym edition — fully equipped gym: use machines for cleaner angles and form

Goal in 50 days: about 79–82 kg, clearly leaner. Fuller shoulders and arms, flatter stomach, sharper face.

How: 3 meals a day (2 is also fine), ~2,300 kcal, 180 g protein, 6 gym days a week, 8,000–10,000 steps a day.

Daily targets

Calories	2,200–2,300	~2,000
Protein	180 g	180 g
Carbs	~230 g	~150 g (half rice/roti at dinner)
Fat	~60–65 g	~60–65 g
Water	3–3.5 litres (1-litre bottle on desk, refill 3×)	Same

Meal count does not matter for fat loss. What matters is total calories and protein. 3 meals or 2 meals both work if you hit 180 g protein.

Coffee with milk: rules

Up to 2–3 cups a day, each with about 150 ml milk (low-fat or toned). No sugar — use stevia or sugar-free sweetener. 2 tsp sugar × 3 cups ≈ 100 kcal of nothing every day.
Each cup with milk ≈ 75 kcal and 5 g protein (already counted below).
No coffee after 4–5 pm. One cup before an evening workout is OK if sleep stays good.
Avoid café drinks: lattes with syrup, frappés, mochas (250–450 kcal each).

Option A: 3 meals a day (recommended)

Assumes: breakfast at home → office → evening gym → dinner at home. The banana is a snack, not a meal.

Meal 1: Breakfast home, ~7–8 am	Omelette: 3 whole eggs + 3 egg whites (1 tsp oil) 2 whole-wheat rotis or 80 g oats Coffee with milk (no sugar)	~615	~42 g
Meal 2: Lunch office lunch box, ~1 pm	180 g cooked chicken breast (tikka / grilled / karahi, little oil) 200 g cooked rice or 2 rotis Salad (cucumber, tomato, onion) 200 g plain dahi or 1 protein Greek yogurt (+10 g protein)	~760	~69 g
Afternoon	Coffee with milk (no sugar)	~75	~5 g
Before gym	1 banana (at your desk before you leave)	~105	~1 g
Meal 3: Dinner after gym	180 g cooked chicken / fish / lean beef 2 rotis or 150 g rice Cooked vegetables / sabzi (1 tsp oil)	~640	~67 g
Total		**~2,200**	**~184 g**

If hungry or under 2,200 kcal: add 15 almonds (20 g) or 1 tbsp peanut butter (~100–120 kcal). Swap banana for 2–3 dates before gym if preferred.

Option B: 2 meals a day

For busy days: no breakfast, just coffee in the morning.

Morning	Coffee with milk (no sugar)	~75	~5 g
Meal 1: Lunch office, ~1 pm	250 g cooked chicken breast 250 g cooked rice or 3 rotis Salad + 200 g dahi	~940	~92 g

Afternoon	Coffee with milk + 1 banana before gym	~180	~6 g
Meal 2: Dinner after gym	200 g cooked chicken / fish / beef 3 rotis or 200 g rice Vegetables 1 scoop whey in water (after gym or with dinner)	~910	~101 g
Total		**~2,100**	**~204 g**

On the 2-meal plan, each meal must have 90+ g protein. If you can't eat that much chicken, the whey scoop is the easiest fix.

Your protein dessert: Adonis Protein Cookie Dough (Baklava)

1 serving ≈ 140 kcal · 21 g casein protein · low carb. Mix with water and eat like dessert.
Option A: 1 serving after dinner instead of peanut butter/almonds → ~2,340 kcal, ~205 g protein.
Option B: instead of the whey scoop at dinner. Same protein, similar calories.
Sweet craving? Use this instead of mithai, chocolate or biscuits.
Max 1 serving a day (2 at most on a high-hunger day). Measure the scoop — don't eat from the jar.

Flavoured protein Greek yogurt

Typical cup: ~120–160 kcal · 15–20 g protein. Use instead of dahi at lunch, as an office snack, or with the banana before gym. 1 cup/day fits as-is. Pick 15 g+ protein and ≤12 g sugar. Skip "fruit on the bottom" dessert versions.

Dates, nuts and fruit

Dates	2–3 normal (~60–70 kcal) or 1–2 Medjool (~65 kcal each)	Best before gym; swap for banana.
Nuts	20 g/day (~120 kcal): ~15 almonds / 25 pistachios / 5 walnut halves	Instead of peanut butter. Count them — never from the bag.
Anaar	½–1 cup seeds (~70–145 kcal)	Great with yogurt or fruit salad.
Aaru (peach)	1–2 peaches (~60 kcal each)	Low calorie, filling.
Other fruit	1 piece / 1 cup per serving	Mango, grapes, banana = higher sugar — keep portions small.

Total fruit: 2–3 servings/day. More fruit → less rice/roti. Avoid fruit juice.

Meal idea: boiled chicken + fruit salad (~600 kcal · ~65 g protein)

200 g boiled/grilled chicken, shredded + fruit salad (½ cup anaar + 1 peach + 1 apple + cucumber/lettuce). Dressing: lemon + chaat masala + pepper, or protein Greek yogurt. No rice/roti with this meal. Avoid mayo, cream, condensed milk or sugar on the chaat.

Rest day (Sunday)

Same meals, but no banana and half the rice/roti at dinner (fill up on vegetables). 1 cheat meal per week (e.g. Saturday dinner or Sunday lunch): one normal plate, not a buffet. Still hit protein.

Office lunch box ideas (prep 3 days at a time)

1	Chicken tikka (oven/air-fryer) + rice + salad + dahi
2	Low-oil chicken karahi + 2 rotis + cucumber raita
3	Grilled fish + rice + sabzi
4	Lean beef/qeema (drain fat) + 2 rotis + salad
5	Chicken + daal (1 cup) + smaller rice (daal adds carbs)

Cook Sunday + Wednesday nights. Fridge up to 3 days. Weigh chicken after cooking.
Eating out: grilled chicken, tikka, seekh kebab, shawarma plate (no extra sauce), salad, plain rice. Avoid fried items, naan + creamy curry, biryani (cheat meal), cold drinks, mayo sandwiches.

Workout plan: 6 days a week (machine gym edition)

Machines are preferred for cleaner joint angles, locked path, and stricter form — ideal while cutting for the wedding. Free-weight options are noted only if useful.
Warm-up every session (8 min): 5 min bike/treadmill → 2 light sets of the first exercise.
Rest: 2–3 min on heavy lifts, 60–90 sec on the rest.
Daily: 8,000–10,000 steps. Walk 10 min after lunch; take the stairs.

Monday	Push A (chest)	—
Tuesday	Pull A (back thickness)	25 min incline walk after weights
Wednesday	Legs A (heavy)	—
Thursday	Push B (shoulders)	—
Friday	Pull B (back width + arms)	25 min incline walk after weights
Saturday	Legs B (lighter) + abs	Optional 20 min walk
Sunday	Rest	Steps only

Progression: when you hit the top of the rep range on all sets, add one plate/pin next session. On a diet, holding strength = success. If lifts drop 2 weeks in a row, eat ~200 kcal more or sleep more.

Monday: Push A (chest)

Chest press machine (flat)	4 × 6–8	Seat so handles meet mid-chest; full stretch without shrugging
Incline chest press machine	3 × 8–10	Seat angle ~30–45°; press up and slightly in
Pec deck or cable chest fly	3 × 10–12	Slight elbow bend; squeeze at the middle
Shoulder press machine	3 × 8–10	Don't lock out hard; stop just before elbows click
Lateral raise machine or cable	3 × 12–15	Lead with elbows; stop at shoulder height
Triceps rope / machine pushdown	3 × 10–12	Elbows pinned to sides; spread rope at bottom

Tuesday: Pull A (back thickness)

Lat pulldown (or assisted pull-up)	4 × 6–10	Pull to upper chest; control the stretch up
Chest-supported machine row	3 × 8–10	Chest glued to pad; squeeze shoulder blades
Single-arm cable / machine row	3 × 10–12	Elbow close to body; pause at the hip
Cable face pulls	3 × 15	Pull to forehead; external rotate at the end
Preacher curl machine or cable curl	3 × 10–12	Full stretch at bottom; no swinging
Rope hammer curls (cable)	2 × 10–12	Neutral grip; elbows still

Wednesday: Legs A (heavy)

Leg press or hack squat	4 × 6–10	Feet mid-platform; knees track over toes
Smith / machine RDL or hip hinge	3 × 8–10	Soft knees; push hips back; feel hamstrings
Lying or seated leg curl	3 × 10–12	Full squeeze at top; slow negative
Smith reverse lunge or split-squat	3 × 10 / leg	Tall torso; front knee tracks over mid-foot
Standing or seated calf machine	4 × 12–15	Full stretch at bottom; pause at top
Plank	3 × 45–60 sec	Ribs down; glutes tight

Thursday: Push B (shoulders)

Shoulder press machine	4 × 8–10	Neutral or slight forward path; don't flare ribs
Chest press machine (lighter)	3 × 10–12	Controlled tempo; leave 1–2 reps in reserve
Cable lateral raises	3 × 12–15	Cable behind body for better side-delt angle
Reverse pec deck (rear delts)	3 × 12–15	Arms almost straight; squeeze rear delts
Assisted dip machine (or close-grip press)	3 × 8–12	Lean slightly forward for chest; upright for triceps
Cable / machine overhead triceps	2 × 12	Elbows high and fixed; full stretch

Friday: Pull B (back width + arms)

Wide-grip lat pulldown	4 × 8–10	Pull elbows down to sides; stretch at top
Seated cable / machine row	3 × 10–12	Neutral grip; chest up; squeeze mid-back
Straight-arm cable pulldown	3 × 12	Slight elbow bend; feel lats, not arms
Preacher / machine curl (incline angle)	3 × 10–12	Long stretch at bottom for peak biceps
Preacher curl machine (second angle)	2 × 12	Strict — no body swing

Saturday: Legs B (lighter) + abs

Leg press (lighter)	3 × 10–12	Higher foot placement for glutes/hams
Smith Bulgarian split squat	3 × 10 / leg	Rear foot elevated; control descent
Leg extension	3 × 12	Squeeze quads at top; don't slam the stack
Seated calf raises	4 × 15	Pause stretch at bottom
Cable crunch or hanging leg raise	3 × 12–15	Curl ribs to pelvis; don't yank with arms
Bicycle crunch	3 × 12 / side	Slow — elbow to opposite knee

Machine form checklist

1. Adjust seat so joints line up with the machine's pivot (elbows with press pads, knees with leg-curl cam).
2. Use a full controlled range — stretch under load, squeeze at peak.
3. Prefer chest-supported and guided machines when tired; they protect form while cutting.
4. Same sets/reps as listed. Add weight when you hit the top of the range on all sets.
5. Machines won't slow fat loss. Diet, protein, steps and sleep still do 80% of the work.

50-day timeline

1–14	Build the habit. Front/side/back photos. Weigh 3× a week in the morning.
15–35	Main fat loss: ~0.5–0.8 kg/week. Flat weight 10+ days → cut ~200 kcal (smaller rice) or add 2 incline walks.
36–43	Stay consistent, keep protein high, sleep 7–8 hours.
44–50 (wedding week)	No crash dieting. Train Mon–Thu, then light or rest. Plenty of water. No new foods/supplements. Final suit fitting ~1 week before.

Daily checklist

- ■ 180 g protein
- ■ ~2,200–2,300 kcal (2,000 on Sunday)
- ■ Coffee with milk, no sugar, max 3 cups, none after 5 pm

- ■ 3+ litres of water
- ■ Max 1 serving protein cookie dough (measured)
- ■ Nuts max 20 g · dates max 3 · fruit 2–3 servings
- ■ Gym session done (machines OK)
- ■ 8,000+ steps
- ■ 7–8 hours of sleep

Calorie and protein values are estimates. Track with MyFitnessPal or HealthifyMe for the first 2 weeks. If you have a medical condition, check with a doctor before starting a diet.
